

One-way unit FE: α_i

Pre-treatment mean

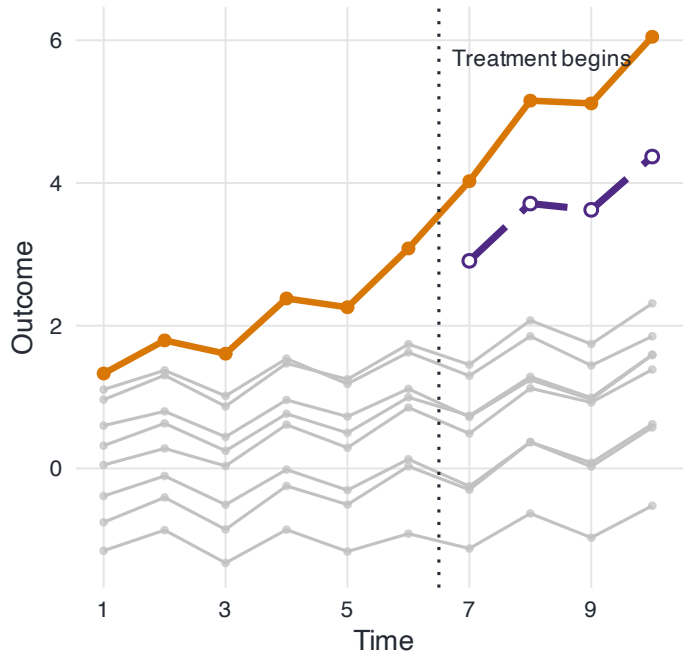

Two-way fixed effects: $\alpha_i + \lambda_t$

Pre-treatment level + time effects
from controls

TWFE + unit-specific trends: $\alpha_i + \lambda_t + \delta_i t$

Also uses the treated unit's trend
relative to controls

Orange: observed outcome, eventually treated unit Purple: imputed $Y(0)$, periods 7-10 Gray: observed controls
